

Agentic Text-to-SQL Explorer

Enter a natural language query

list all products

Run

Plan

```

**Plan**

1. **Source table**: `products`
2. **Columns to return**:
  - `productCode`
  - `productName`
  - `productLine`
  - `productScale`
  - `productVendor`
  - `quantityInStock`
  - `buyPrice`
  - `MSRP`

3. **Joins**: None (all required data resides in `products`).

4. **Filters / WHERE clause**: None - retrieve every row.

5. **Aggregations**: None.

6. **Ordering**: Optional; if a deterministic order is desired, sort by `productCode` (or `productName`).

7. **Limits**: None.

```

Generated SQL

```

```sql
SELECT
 p."productCode",
 p."productName",
 p."productLine",
 p."productScale",
 p."productVendor",
 p."quantityInStock",
 p."buyPrice",
 p."MSRP"
FROM public.products AS p
ORDER BY p."productCode"
LIMIT 100;
```

```

Validation

Valid: False
